

Mario Alexandar Simic

Full-Stack Software Engineer (.NET / React)

Sweden, Gothenburg

mario.jobb@gmail.com

◆ Profile Summary

Full-stack developer trained to build **production-grade applications end to end**, from database design and secure .NET APIs to modern React UIs and cloud deployment. Strong focus on **clean code**, **clean architecture**, **security**, **validation**, and reliable team delivery using **GitHub Flow**, **Scrum**, and **CI/CD pipelines**.

◆ Backend, .NET & Architecture

- Object-oriented analysis & design (OOP, UML, clean code principles)
 - .NET Core, ASP.NET MVC, Minimal APIs, Razor Pages, Blazor
 - Clean Architecture, layered architecture, DTOs, repository pattern
 - CQRS with MediatR, pipeline behaviors (logging, validation, error handling)
 - Generics, reusable abstractions, generic repositories
 - Validation with FluentValidation, request hardening patterns
 - TDD, unit testing, integration testing
-

◆ Security & Identity

- ASP.NET Identity, user management, roles & permissions (RBAC)
- JWT authentication, secure token handling, claims-based access
- Two-factor authentication (email, SMS)
- TOTP with Microsoft & Google Authenticator

- Secrets management, environment-based configuration
-

◆ **Databases & Data Access**

- SQL, SSMS, SQL Express, CRUD operations
 - Relational modeling, ER diagrams
 - Entity Framework Core, LINQ, migrations
 - Supabase integration
 - NoSQL fundamentals and trade-offs
-

◆ **Frontend, React & UI**

- HTML, CSS, JavaScript, async API flows
 - React, Tailwind CSS, shadcn/ui, MerakiUI
 - Axios, TanStack Query (fetching, caching, syncing)
 - State management with Redux & Zustand
 - Forms & validation: React Hook Form, Zod
 - Auth-aware UI patterns, cookies, localStorage, tokens
-

◆ **Full-Stack Integrations**

- Secure frontend ↔ backend integration using DTO contracts
- Supabase, Prisma schema modeling
- Email systems with Resend & MailKit
- Media handling with Cloudinary

◆ DevOps, Git & Deployment

- Git & GitHub workflows, PRs, code reviews
- GitHub Actions, CI/CD pipelines, secrets & environments
- Deployments: Vercel, Netlify, Azure App Service, Azure DevOps, Azure APIs

◆ AI & Modern Tooling

- AI-powered applications with API-based model integration
- OpenAI, ChatGPT, Claude, Gemini, Google AI Studio
- Rapid UI & product workflows with modern design tooling

◆ Team Delivery & Leadership

- GitHub Projects, issues, milestones
- Agile delivery: Scrum, Kanban, sprint planning & retrospectives
- Project lead & Scrum leader experience
- Task decomposition, team coordination, delivery ownership

◆ Technical Keywords (ATS)

.NET Core, ASP.NET, Minimal API, Clean Architecture, CQRS, MediatR, EF Core, LINQ, SQL, JWT, Identity, RBAC, FluentValidation, React, Tailwind, TanStack Query, Redux, Zustand, React Hook Form, Zod, CI/CD, GitHub Actions, Azure, Vercel, Netlify, Prisma, Supabase, OpenAI API
